

Experian Hunter saves clients nearly £4 billion annually in fraud

With 400 worldwide clients, it's no wonder that Hunter is the application fraud management solution of choice. The results speak for themselves...

1

Hunter detects 1.2 million fraud and suspect applications

Last year Hunter processed over 151 million applications for its 400 clients. With its fraud risk engine, investigation workbench and data consortium, Hunter helps you make smart application fraud decisions without disrupting good customers.

Hunter clients are adding today's most in-demand technologies

When combined with Experian's Identity and Fraud platform, Hunter's consortium data provides valuable insight that allows clients to selectively apply the right level of protection needed for every transaction. These additional layers include identity proofing, document verification, behavioural biometrics and machine learning analytical models.

2

3

Hunter rapidly expands on the success of data consortiums

Cross-matching across member organisations means that if one business is attacked, every member knows. Consortium members report drops in fraud attack rates because fraudsters simply avoid their businesses.

45% improvement in fraud management from participating in a data consortium over screening against their own data

Hunter consortiums are starting up all around the world, including a new one for UK telecoms and another for banks in Colombia.
